Po-Heng (Henry) Lin

New York, NY | +1 (832) 627-6734 | me@henrylin.dev
henrylin.dev | github.com/PoHengLinTW | in/pohenglintw

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C/C++, Shell
Backend & Distributed Systems: Node.js, REST/OpenAPI, GraphQL, Kafka, RabbitMQ, Bull, Nginx, caching, distributed jobs
Data: PostgreSQL (locking, query tuning), Redis, MySQL
Infrastructure: Docker, Kubernetes, Jenkins, CI/CD, Grafana, metrics & alerting
Security: RBAC/authorization, JWT, workload identity (SPIFFE), secret scanning
Frontend: React, Vite, micro-frontend architecture, component libraries, SSR

PROFESSIONAL EXPERIENCE

Bloomberg L.P. New York, NY
Software Engineer Feb. 2023 – Present

Core engineer on the firm's two flagship web platforms: a **multi-tenant micro-frontend PaaS** composing dozens of internal and client portals (becoming the company's golden path for web), and its **static-asset hosting platform** serving 100+ tenants.

- **Co-designed and built a centralized authorization service, now in production,** replacing permission checks scattered across micro-frontends; benchmarked the upstream RBAC APIs (~17K users in ~120 ms) to choose a hybrid push/pull sync
- **Cut config-service write runtime ~75% in production** by finding a commit hook that rebuilt every tenant's manifest on each write and replacing ORM hydration with SQL (~2.5× fewer queries); fixed a cross-server race with row locks
- **Replaced ticket-driven platform changes with self-service and audited approval:** designed the permission model, built much of the React UI, and registered a new change-approval type; 1,000+ requests raised in ~2 months
- **Owned the asset platform's API-token lifecycle for 3 years (100+ tenants):** local JWT verification, write-through Redis revocation, an idempotent distributed expiry job, and self-service issuance that retired a manual on-call task
- **Built observability for both platforms:** per-route latency, job-health and adoption metrics with Grafana dashboards for 3 services on one template, per-tenant storage alerts at 65% capacity, and a fix for a metrics bug undercounting by 4×
- **Led workload-identity adoption for EU DORA compliance:** wrote the prioritized plan for 15 applications, onboarded 5 of 6 high-priority services, and closed a sudo root-escalation path with a no-outage rollout
- **Led a pod of 5 engineers from 5 teams with no reporting line** to move the company-wide React component library from Jest to Vitest: set the strategy, built the coexistence setup, and shipped the final cutover (1,700+ tests)

Meta Platforms Inc. Bellevue, WA
Production Engineer Intern May 2022 – Aug. 2022

Infrastructure team behind a **distributed pub/sub service** (25+ billion messages a day); I built its **capacity-planning** tools.

- **Turned weeks-long capacity estimates into a ~5-minute self-service tool:** customer teams get the hosts and power needed to onboard onto an infra service, built on a data scientist's model, replacing manual work by infra engineers
- **Replaced spreadsheet- and email-based capacity requests with a tracking service** (Hack, React, GraphQL, MySQL) for infra customer teams; designed its features with the team and sped up its queries 10%+

Patere Technology Co. Hsinchu, Taiwan
Software Engineer Jun. 2020 – Jul. 2021

Startup building healthcare products: a **remote patient-monitoring platform** and a **medical hiring app** with 100K+ users.

- **Built the real-time WebRTC video pipeline for the patient-monitoring platform,** streaming camera feeds to teammates' computer-vision models that assess recovery and flag dangerous movements by elderly patients
- **Cut the hiring app's GraphQL query time 20%** by batching resolver calls, removing unnecessary joins from the slowest database queries, and parallelizing reads that ran sequentially
- **Automated deployments with CI/CD on GCP and Kubernetes,** replacing a 30–60-minute manual deploy process

EDUCATION

Rice University Houston, TX
M.S. in Computer Science, GPA: 3.85/4 Aug. 2021 – Dec. 2022

National Chung Cheng University Chiayi, Taiwan
B.S. in Computer Science and Information Engineering, GPA: 3.76/4 Sep. 2016 – Jun. 2020
